Agenda

1 Introduction to Openfetion

- What is Openfetion ?
- Openfetion Snapshot
- How I got the idea of developing Openfetion
- Development History

2 Introduction to the protocol

- How I got the protocol of Fetion ?
- What the protocol looks like ?

3 How it was implemented ?

4 Conclusion of the work

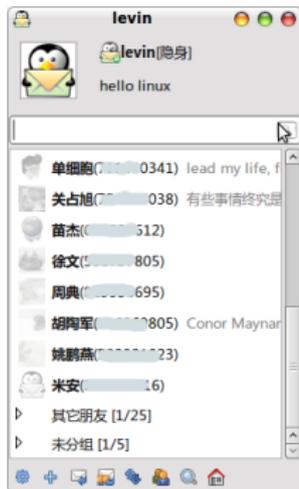

What is Openfetion ?

OpenFetion is a Fetion client for linux based on GTK+2.0, implementing Fetion Protocol Version 4. It supports most features of Fetion. What's more, it's lightweight and efficient with intuitive interface.

OpenFetion is the main branch of the ofetion project which also contains pidgin-openfetion, libofetion and cliofetion.

Snapshot

Why developed Openfetion

- I need a fetion client for linux to chat with my friends.
- libfetion's unfriendly appearance in GTK environment.
- I think it's better for an IM to display friends' portraits.
- Fetion's protocol is simple and easy to implement.
- too much free time.

Openfetion development history

- First edition was released by the end of 2009, hard to use, many many bugs
- Fetion changed protocol in the beginning of 2010, so I analysed the new protocol, and rewrote all the code
- We developed fetion plugin for pidgin/empathy in late 2010, which was also ported to MacOS Adium by Evan JIANG

What the protocol looks like ?

The protocol of Fetion is some kind of SIP, not the SIP defined in RFC3261, but a simplified SIP defined in a draft of IETF.

```

How it was implemented ?

Several shared libraries was invoked to implement OPENFETION. Here're the core libraries.

- **libgtk+-2.0**

GTK library for the UI.

- **openssl**

encryption library for SHA1,RSA and HTTPS.

- **libxml2**

library for XML generation and parsing.

- **sqlite3**

lightweight SQL database for data localization.

Conclusion of the work

OpenFetion is not my own work, but the result of the ofetion team. One can not create good software, a team can.

The work of opensouce software development is really fascinating. If you want to find something to do, join an opensource project, or just start a small project of your own, no one will blame you for your bad work, they just encourage you.

Thank You
